The Future of the Public's Health in the 21st Century reaffirms the vision of Healthy People 2010, and outlines a systems approach to assuring the nation's health in practice, research, and

policy. This approach focuses on joining the unique resources and perspectives of diverse sectors and entities and challenges these groups to work in a concerted, strategic way to promote and protect the public's health. Focusing on diverse partnerships as the framework for public health, the book discusses: The need for a shift from an individual to a population-based approach in practice, research, policy, and community engagement. The status of the governmental public health infrastructure and what needs to be improved, including its interface with the health care delivery system. The roles nongovernment actors, such as academia, business, local communities and the media can play in creating a healthy nation. Providing an accessible analysis, this book will be important to public health policy-makers and practitioners, business and community leaders, health advocates, educators and journalists. *Report Series on Mental Health Statistics* American Bar Association Foundations of Sleep Health presents sleep health as a critical element of overall individual and population health. In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities

in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome. *Monthly Bulletin* Environmental Control and Public Health. Many Americans believe that people who lack health insurance somehow get the care they really need. Care Without Coverage examines the real consequences for adults who lack health insurance. The study presents findings in the areas of prevention and screening, cancer, chronic illness, hospital-based care, and general health status. The committee looked at the consequences of being uninsured for people suffering from cancer, diabetes, HIV infection and AIDS, heart and kidney disease, mental illness, traumatic injuries, and heart attacks. It focused on the roughly 30 million-one in seven-working-age Americans without health insurance. This group does not include the population over 65 that is covered by Medicare or the nearly 10 million children who are uninsured in this country. The main findings of the report are that working-age Americans without health insurance are more likely to receive too little medical care and receive it too late; be sicker and die sooner; and receive poorer care when they are in the hospital, even for acute situations like a motor vehicle crash. **University of the State of New York**

UNIT TWELVE: Ophthalmology An overview of the physiology, anatomy, complaints, diagnosis, and treatment of both disorders and diseases of the eye. This Manual provides a resource for the training of field medics and community health workers who serve in under-resourced areas during conflicts or disasters. It targets those with a basic educational background and little or no prior medical education and, in conjunction with an intensive 4-8 week training program, will allow medics to diagnose and treat the most common 90% of illnesses and traumas. Based on a "Systems" approach (rather than symptom or specific disease orientation), the Manual covers basic anatomy and physiology and then focuses on the symptoms, physical findings, natural history, and differential diagnoses of the illnesses and injuries most likely to be encountered by health workers in the field. Treatment protocols are outlined, using those medications and materials likely to be found in under-resourced environments, including the generic medications of the WHO Essential

Drugs List. The purpose is to train field health workers quickly and give them the skills to treat the majority of wounded and ill in situations when whatever previous health care system there may have been is overwhelmed. Developing capacity and self-reliance by training persons from affected areas empowers individuals and communities - even those displaced from their homes - to regain control of their lives and destinies. This is the foundation of emergency humanitarian assistance. This Manual is also meant to be carried into the field as a ready reference for field health workers including trauma medics and community health workers as well as more highly trained medical personnel who may happen to find themselves practicing out of their areas of expertise. This could include national and international physicians, paraprofessionals, and nurses responding to a humanitarian emergency. This Manual does not intend to supersede local or national healthcare systems or protocols, but to provide an adjunct in an emergency when, as often happens, the perfect may be the enemy of the good.
